

# Analysis for WTWY Street-team Deployment

*Team Turnstile Hoppers*

Gretta Mae Ferguson, Shweta Pai,  
Alex Bell, Steven Bierer

# Problem Statement

- Optimize placement of **WTWY street teams** to advertise a Gala event in early summer.
- Goal is to **increase attendance** of the event and create **general awareness** about the organization.

# Overall Approach

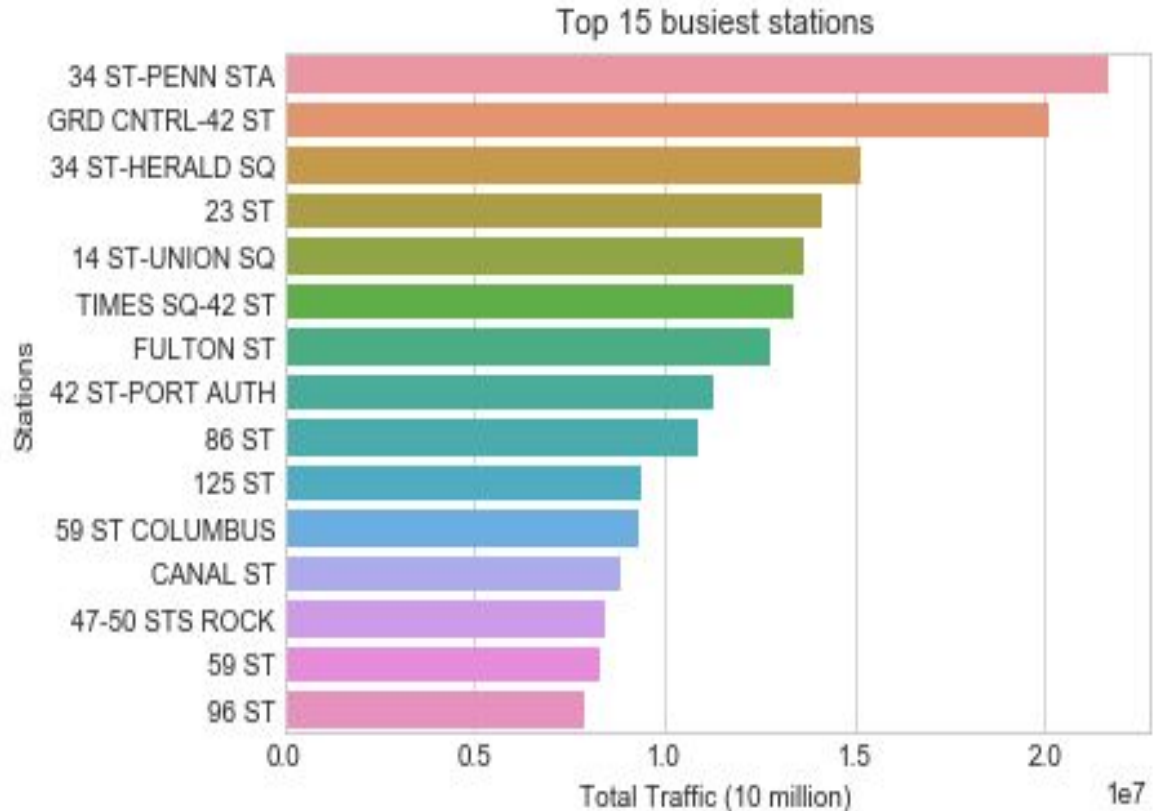

- MTA turnstile data as proxy for pedestrian traffic in NYC
  - focus on stations with high daily usage
- Consider proximity to technology centers, non-subway pedestrian traffic, and demographic data
- Apply data-scraping and geocoding tools

# MTA Turnstile Data

- Data was as available as cumulative counts for each turnstile.
- Focused on weeks preceding the event (Spring 2018 data).
- Aggregated **total subway user traffic** for each station.
- Filtered outliers

# MTA Turnstile Data

Stations with the highest traffic are mostly located in Manhattan.

# MTA Turnstile Data

Data is consistent over days of the week.

Investigate the time interval for Thursday and Friday

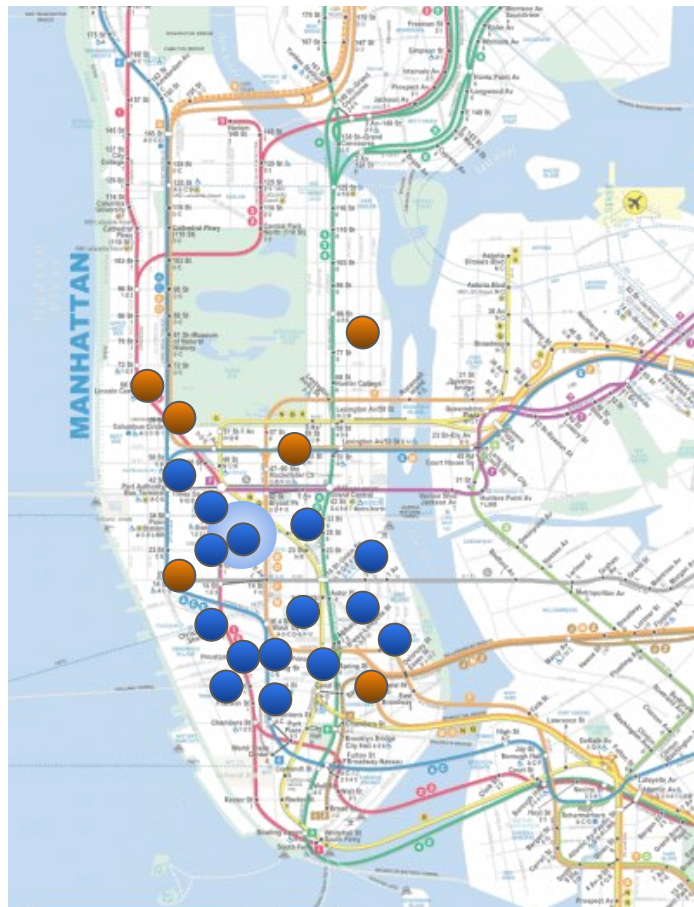

# Tech Centers

Top 30 **tech companies**, scaled by # of employees *source: builtinnyc.com*

6 **largest universities**, scaled by # of students *source: Google.com*

Transformed site-to-station distances  
using a gaussian smoothing curve

# Tech Centers

## Stations ranked

## Large universities and companies increase foot traffic at subway stations

# Census Data

## High Income by Station

# WalkScore

Higher WalkScore

=

More Foot Traffic!

# WalkScore

*Stations  
ranked*

76 stations have  
a WalkScore of  
100, and 60%  
have a  
WalkScore > 95

# Final Recommendations for Canvassing

Addition of the technology, walking, and affluence factors suggest different stations than the turnstile data alone.

Top five stations are: Grand Central, World Trade Ctr, Herald Sq., Union Sq & 14th, Penn Station

# Considerations for Future Analysis

- Analyze MTA-turnstile data to separate different stations with similar names.
- Hone in on the exact location of the top busiest stations.
- Use more tech and educational sites, and more granular demographic data.
- Adjust weights of input factors given client feedback

QUESTIONS?

# APPENDIX

# Assumptions

- Volunteers would start canvassing in Spring 2018 for a June 2018 gala.
- Target demographic will use the subway stations near their place of work.
- Chosen tech sites are representative of the city tech sector as a whole.
